

## 2021 Executive Summary

With the pandemic continuing to disrupt and challenge operations in 2021/22, we renewed our commitment to collaborative work and continued to deliver on our goals through a strong joint effort between Toronto Metropolitan University, Unity Health Toronto, our leadership and staff.

We placed over 20 new talented individuals in industry internships and trained over 30 science and engineering graduates to enter the medical technology sector. We strive to continue to offer an environment that promotes equity, diversity and inclusion (EDI) and are in the process of developing a Micro-Certification that includes EDI concepts. We engaged with the Leacross Foundation and placed four female-identifying science and engineering students in internships.

For the upcoming year, as we continue to resume normal activities after two years of COVID, our focus is to increase collaborations and continue to offer a world-class training environment. With the vision of our leadership, support of our staff and our talented and engaged membership, we will continue to deliver on our goals with confidence and optimism.
